

Manuscript file

Check that your manuscript has been prepared according to the [journal guidelines \(opens in a new window\)](#) or your submission may not meet our technical checks.

Instructions

It's best if your manuscript — including all text, figures and tables — is in one editable file.

Upload your manuscript in an editable format for peer review (maximum 2GB).

This will be either:

- a Word document with figures and tables placed in the body of the text where they are referenced
- LaTeX documents with figures and tables compressed into a .zip format. We will compile these into a PDF for peer review.

Start by uploading your manuscript. We'll try to fill in or update some form fields by extracting the information.

Upload manuscript

Figures and tables (optional)

You do not have to upload your figures and tables separately at the initial submission stage. However, if your submission is accepted, you will need to provide the original high-resolution images for your figures and tables as separate files.

[Upload figures and tables separately](#)

Figures

If you prefer to upload your figures separately, please make sure you:

- upload accepted file types (.jpeg, .tiff or .eps images)
- upload figures in the order that they appear in your manuscript along with the correct labelling, for example Figure 1
- do not obscure any figures with labels

Upload figure(s)

Tables

Upload tables in the order that they appear in your manuscript along with the correct labelling e.g. Table 1.

Any tables that are too large to be presented graphically within the body of your manuscript should instead be uploaded as supplementary material.

Upload table(s)

Supplementary material (optional)

Upload supporting material that you want to be published alongside your manuscript.

Upload a supplementary file

Related files (optional)

Upload any supporting documents you would like to be considered in the review and assessment of your manuscript. This could include any papers with overlapping authorship that are under consideration, lab validation reports or personal correspondence.

Please note that these files will not be published but may be shown to reviewers as

part of our assessment.

If you want to upload a version of your manuscript with tracked changes following reviewer comments...
